

E.T. Listat

Moulding catalogue

The right moulding
for the right location

E.T. Mouldings Oy offers an extremely wide selection of planed mouldings, profiles and panels. All wood mouldings manufactured by us are high-quality Finnish pine. Many moulding models and panels are available in MDF, ready finished or coated. Compare the various moulding models and profiles. Artistically shaped mouldings are characteristic of renovations and traditional interior design styles. Modern interior décor tends to be restful, featuring large, smooth surfaces. Construction mouldings and panels can also be combined to achieve pleasantly varying patterns and details.

Mouldings and panels

Stylishness, comfort and cosiness are often accomplished in subtle ways. ET mouldings and panels are the choice of every interior designer and renovator when a neat finish is the objective. Our wide selection of mouldings and panels provides you with a wealth of alternatives for enhancing the décor of your home's modern, continental or traditional atmosphere and style.

Wood or MDF

MDF mouldings are made from wood fibreboard consisting of pressed deciduous and/or coniferous wood. Because MDF materials have no grains or knots, it is easily worked and retains its shape well. Compared to wood, the moisture resistance capacity of MDF materials is weaker. MDF mouldings are available painted or as film-coated wood imitations.

Sound planning ensures success

When you plan and purchase mouldings, take into account the extra material required during installation. Because mouldings have to be mitred at the corners just before fitting, you will need slightly more material. Note also that wood mouldings and panels that have not been stored at room temperature should be given time to adjust to the new temperature and moisture conditions before installation; the recommended period is 1-2 weeks. MDF mouldings and panels are installation-ready when taken out of the packaging.

Assured availability

The moulding and panel models presented in our catalogue are standard products that are immediately available from stock. You can also order ET mouldings ready surface treated in the colour and shade of your choice. We also manufacture various kinds of artistically shaped mouldings and specially coated MDF mouldings to order.

How to use the catalogue

All ET wood lists and panels are made from pine unless otherwise specified in the product code. The main quality class of the products is VM-EM (virtually knotless-special class pine) unless otherwise indicated.

Owing to printing limitations, the brochure's colours may differ from the mouldings' actual colours. If required, you can obtain a moulding sample from your dealer.

Base mouldings

mouldings

* VM = virtually knotless EM = special class pine

Round mouldings

When shapes should speak
and you want a softer inter-
face with the décor, choose
ET round mouldings; they
are manufactured from
Finnish wood.
